

ANANDHASASIDHARAN S

Computer Science & Business Systems Student | AI Security & Threat Detection
anandhasasidharan492@gmail.com | [linkedin.com/in/asd01](https://www.linkedin.com/in/asd01) | github.com/Anandhasasidharan

SUMMARY

Third-year Computer Science and Business Systems student at SRM Institute of Science and Technology with a genuine interest in how systems break, how AI models misbehave, and how to build tools that catch both. Drawn to the intersection of cybersecurity and artificial intelligence – from auditing model behaviour to detecting real-world network threats. Currently deepening expertise through the CompTIA certification track while building open-source security tools to put theory into practice.

EDUCATION

SRM Institute of Science and Technology

Bachelor of Technology in Computer Science and Business Systems | CGPA: 8.4

Chennai, India

Aug 2023 – May 2027

CERTIFICATIONS

CompTIA A+ · CompTIA Network+ · CompTIA Security+ · CompTIA CySA+ · CompTIA PenTest+ · CompTIA Linux+ (Udemy)

PROJECTS

VeriAlign – LLM Verification and Hallucination Detection Proxy

2025 – Present

Python, FastAPI, Natural Language Inference (NLI), DeBERTa, Docker, OpenTelemetry

- Built a reverse proxy (based on arXiv:2605.04454) that intercepts LLM API calls and enriches responses with claim extraction, NLI-based hallucination detection, contradiction analysis, and confidence scoring
- Implemented safety middleware covering PII redaction (emails, SSNs, API keys), jailbreak detection, and toxicity filtering across OpenAI, Anthropic, and any OpenAI-compatible provider

github.com/Anandhasasidharan/verialign

AgentOps – AI Agent Safety and Observability Platform

2025 – Present

Python, FastAPI, PostgreSQL, Docker, Terraform, AWS ECS Fargate, OpenTelemetry

- Developed a 4-microservice safety platform (Circuit Breaker, Chaos Toolkit, SLO Platform, Dashboard) that enforces real-time policies on AI agent tool calls and blocks destructive commands
- Integrated OWASP and EU AI Act compliance reporting, burn-rate SLO evaluation, and 16 chaos failure modes; deployed to AWS ECS Fargate via Terraform with 121+ tests across services

github.com/Anandhasasidharan/AgentOps-Agent-System-Operations

VulnGPT MCP Server – Automated Vulnerability Scanner

2024 – Present

Python, Model Context Protocol (MCP), Docker

- Built a security-focused MCP server for automated vulnerability scanning: static code analysis, CVE dependency audits, hardcoded secret detection (AWS credentials, API keys, GitHub tokens), and tool poisoning detection

github.com/Anandhasasidharan/vulngpt-mcp-server

Community AI Audit Framework

2024 – Present

Python, Splunk, OpenAI API, Anthropic API, HuggingFace, PyTorch

- Designed a plugin-driven framework that runs the same backdoor scan across OpenAI, Anthropic, local PyTorch models, and HuggingFace without modifying the scanner; findings pipeline integrated with Splunk and Elastic

github.com/Anandhasasidharan/community-ai-audit

VOLUNTEER EXPERIENCE

NGO Outreach Program – Government School

Chennai, India

Student Volunteer

May 2024 – June 2024

- Assisted students with foundational subjects and supported classroom activities alongside teaching staff
- Contributed to improving digital literacy and basic computer skills among school students

TECHNICAL SKILLS

- Programming Languages:** Python
- Security Tools:** Kali Linux, Splunk, Nmap, Wireshark
- Frameworks & Libraries:** FastAPI, Streamlit, PyTorch, HuggingFace Transformers, scikit-learn
- Security Domains:** Network Security, Threat Detection, Penetration Testing, AI Security Auditing, Anomaly Detection
- Operating Systems:** Linux, Windows
- Spoken Languages:** English, Tamil
